

PDF Text Extraction Test Document

Page 1

This is a normal text-based PDF. The text on this page is real PDF text, not an image or scanned content. It should be directly extractable using PyMuPDF.

Document ID: TEST-PDF-001
Customer: Example Corporation
Status: Active
Total Amount: 12500 INR

Page 2

This is the second page. It exists so that we can verify that our extractor returns text separately for each PDF page.

The expected result is a Python list containing two strings: one string for page 1 and another string for page 2.

Page 3

Final test page. If PyMuPDF extraction is working correctly, this text should also appear in the extracted output.
